

Connecting to EC2 Instance:

1. download csc648team02.pem file.
2. Open terminal and navigate to the directory where the pem file is.
3. Ensure the key is not publicly viewable by running this command:

```
chmod 400 csc648team02.pem
```

4. Using the Public DNS, connect to the instance using this command:

```
ssh -i "csc648team02.pem"  
ubuntu@ec2-54-215-253-212.us-west-1.compute.amazonaws.com
```

5. To access Milestone 0 Project, navigate to the root user using this command:

```
sudo su
```

6. Then navigate to this directory to access the M0 project:

```
cd /var/www/html/
```

7. Lastly navigate to the project folder and from there you have access to applications folder, credentials, etc.

```
cd csc648-030-sp21-Team2
```
